DESIGN CHOICES

GAMEPLAY LOOP

- Goal: Navigate through rooms in a 2D platformer to reach the outside world.
- Challenge: The player character is blind, making navigation and exploration difficult.
- Reward: Progressing through the house and getting closer to the outside satisfies the character's curiosity.

DESIGN CHOICES

Skill vs Randomness

- Gameplay relies primarily on player skill rather than randomness.
- Players learn and adapt to the character's physical disability.
- Level traversal rewards observation, exploration, and adaptation.
- Difficulty is designed to remain accessible to a wide audience.

DESIGN CHOICES

Bartle's Player Types

- Primarily appeals to Explorers.
- Players discover and interact with the environment through sound cues.
- Encourages curiosity and environmental exploration.
- Single-player experience with minimal competitive or social elements.
- Accessible design targets casual and first-time players.

FUTURE DEVELOPMENTS

- Harder levels, such as the character leaving the house to buy groceries?
- Other disabilities such as other physical disabilities like deaf and mute or mental disabilities such as ADHD or dementia.
- Further expansion of narratives and game mechanics involving deliberate audio cues.
- Adding save/load functionality

Thank You!
